Determination of Trailer Transshipment Capacity at Container Terminal (CT) Přerov

1. Purpose of the Document
This instruction defines the maximum operational capacity for trailer transshipment at the CT Přerov site and sets out the approval procedure for individual transshipment operations in order to ensure safe, efficient and smooth logistics processes.

2. Capacity Determination
The maximum operational transshipment capacity at the CT Přerov site is set at **30 trailers at any one time.** This capacity must be respected when planning transport and transshipment operations, taking into account the terminal's current operational workload.

3. Ordering and Approval Process
Each planned delivery of trailers for transshipment must be notified in advance by means of an order.
In particular, the order must include:

- the number of trailers intended for transshipment,
- the requested transshipment date,
- customer identification,
- any specific handling requirements.

4. Approval of Transshipment
Trailer transshipment may only be carried out with the prior approval of RCO – CSKD.
Approval is granted considering:

- the terminal's current capacity,
- the availability of handling equipment,
- the availability of operational personnel,
- safety and operational conditions.

If capacity is insufficient, RCO - CSKD reserves the right to propose an alternative date for the transshipment operation.
