

Battery Logistics

Climate-friendly. Safe. Multimodal.

Sensitive lithium-ion cells and battery modules need to be transported quickly, reliably and cost-effectively – while meeting the highest safety and sustainability standards. Rail is the ideal complement to your sustainable supply chain. With our specialised logistics solutions, we offer you an end-to-end multimodal transport chain – from supplier to OEM. Flexible capacities, top-level safety standards and seamless integration into your processes make your supply chain efficient, resilient and future-proof.

Your Cargo. Our Logistics Solutions.

- **Reliable supply:** Europe-wide multimodal supply chain management for battery cells and modules.
- **Short lead times:** Benefit from one of Europe's largest logistics networks.
- **Seamless integration:** Our services fit directly into your existing processes.
- **Cost optimisation:** High loading capacities in rail freight reduce your transport costs sustainably.
- **Maximum safety:** Specialised containers, certified safety concepts and proven expertise for sensitive goods.
- **Direct industry access:** Connection to the RCG network, rail infrastructure, terminals, railports and logistics centers.
- **Tailored solutions:** Customised concepts for vehicle manufacturers, suppliers, OEMs and logistics providers in the e-mobility sector.
- **Sustainability guaranteed:** Low-carbon transport with 100% green traction power in Austria, alternative fuels and certified climate protection projects.
